

Electronics Engineer

The company

3Brain is a young, dynamic, internationally active company whose mission is to provide state of the art technology to support life science and pharmaceutical research. We develop, manufacture and distribute high-quality instruments based on our patented high-resolution CMOS multi-electrode array (CMOS-MEA) for in vitro electrophysiology. The company is located in Switzerland nearby Zurich (Wädenswil) and has installed its products worldwide in laboratories and pharma companies also thanks to its network of distributors covering among others US, Canada, China and Japan.

Job description

For the next expansion step, 3Brain is looking for a full-time electronics engineer to reinforce our R&D team.

You will develop new embedded systems for high-speed data acquisition devices including system engineering, schematics design and layout, testing and verification. You will also contribute to the current device production line, including tasks as automation, production testing and optimization.

Required skills

- BSc/MSc in Electrical Engineering
- Analog Electronics (Schematics, Layout)
- High-speed digital design (Schematics, Layout)
- Prototyping and testing
- Good background in signal processing
- Fluency in English and German

- Initiative, independence and ability to communicate and work effectively with other team members in a multicultural and international environment

Desirable skills

- Microprocessor programming and/or VHDL

What we offer

- A dynamic and stimulating work environment in a young, emerging company focusing on one of the most fascinating research fields, brain technologies
- Possibility of professional growth, both technical and economical
- Flexible work hours
- Place of work Wädenswil, Switzerland
